FENTANYL CITRATE INJECTION

250 mcg/
 5 mL

During the 1800's, fearing that there was a trade imbalance due to their insatiable need for tea from China the British started covertly selling Opium to Chinese merchants. By the time the Opium Wars started, the Chinese were so dependent on Opium that they could hardly put resistance.

SACKLER OCTAGON

PROTECT FROM LIGHT.
 STORE AT 20°-25°C
 (68°-77°F)

PROMETH WITH CODEINE

8 FL OZ
 237 mL

Cough Syrup each 5 mL
 The MET Ball gathers the highest profiles of show business for its funding event every year. Taking place in the Sackler Wing of the museum, its backdrop is the Temple of Dendur (15.BC) 'saved' by the Americans from the upcoming flood caused by the Aswan Dam built by Nasser in 1965 with Soviet support.

FENTANYL

1,000 mcg/20 ml
 (50 mcg/mL) (0.05 mg/mL)

Preservative-free

Opium and its synthesized versions have accompanied the development of the Western Hemisphere, mostly through its wars. From Civil Wars to Vietnam's addicted soldiers and lately in Afghanistan where troops covertly protect the opium trade.

One of the richest families in America made their fortune by aggressively introducing an opioid derivative into the healthcare system. Marketed as a slow release painkiller, OxyContin, has been widely prescribed by physicians and became rapidly known to drug addicts for its potency when crushed and snorted. Purdue Pharma, purchased by the Sackler family in 1952 during the Cold War, has been manufacturing OxyContin since 1995.

The chemical name is 4, 5 α -epoxy-14-hydroxy-3-methoxy-17-methylmorphinan-6-one hydrochloride. Oxycodone is a white, odorless crystalline powder derived from the opium alkaloid, thebaine. Oxycodone hydrochloride dissolves in water (1g in 6 to 7 mL). It is slightly soluble in alcohol (octanol water partition coefficient 0.7). Oxycodone is the active ingredient in OxyContin tablets.

The 10 mg, 15 mg, 20 mg, 30 mg, 40 mg, 60 mg and 80 mg tablets of OxyContin contain the following inactive ingredients: butylated hydroxytoluene (BHT), hypromellose, polyethylene glycol 400, polyethylene oxide, magnesium stearate, titanium dioxide.

NDC 59011-480-10

Misleading doctors with biased PR material and casual bribes (travels, gifts...) Sacklers Purdue Pharma created one of the largest overdose epidemics in US history.

Rockstar Prince died of an overdose of Fentanyl. He originally started to take opioid painkillers to treat hip pain — a result of his habit of dancing in high heels.

From the late 19th century until today, one family managed to draw a continuous arc between British Orientalists' drive in Egypt, the theft of ancient artifacts by European museums and scholars, post-colonial civil engineering, contemporary art, show business, charity, and antique, neoclassic, postmodern, generic, parametric architecture.

It has been argued that the current opioid epidemic in America is partly a response to high levels of unemployment, particularly in areas where manufacture jobs have been lost to automation. Purdue Pharma business model and their large scale Public Relations exercise, where doctors are encouraged to prescribe OxyContin, is creating the perfect landscape for Artificial Intelligence to be implemented seamlessly and take over the diminished role of humans.

If the 80s presented a cocaine fueled landscape where the mantra was Work Hard, Play Hard, are we now looking at the shores of a Work Less, Play Less new world? Automation and the perceived threat of AI technologies is often presented as a conflict between work and leisure and fabricates an unnecessary duality. There is a simplified vision of the outcome of this new technological revolution — endemic unemployment will engender a dystopian eternal fun for the capitalists or widespread misery for the laborer.

Playing and enjoying are part and parcel of a 'working' society; a society with no work is inevitably a society with less play. The often moralist balancing act between work and play must be put into question. If we consider human intelligence unique for its capacity to enjoy thinking, we can see AI and Automation not as a threat but as an opportunity.

The role of joy in establishing the difference between human and artificial intelligence has been outlined by Venkatesh Rao in his essay 'Intelligence Reconsidered'. The current developments of AI are all based on a quest for efficiency and problem solving. These might indeed help relieving humanity's future from painful, repetitive and managing tasks but it already appears that such thinking is influencing social, technological and design behaviors. Cars, but also houses, are being designed using billions of users'

A cosmogony of Egyptian temples, pharmaceutical laboratories, dubious scientists, and foreign military intervention orchestrate a large-scale ballet of craving bodies bursting with the excruciating pain of withdrawal, giving up their dignity to end their torment.

Usual adult dosage: One tablet every four to six hours, as needed for pain.

databases to create algorithmic solutions with efficiency and problem solving as their only goal. On the contrary, very few people have explored the actual uniqueness of human thinking patterns: the ability to enjoy thinking per se, detached from any rational or result-oriented goal. Playing and playful thinking as an open ended pleasurable exercise is the most exciting way for humans to remain relevant and avoid an AI pandemic. The problem rests squarely on an economic system that allows and encourage business models like the one developed by the Sacklers.

LOVE

'The vision is resolutely social which suggests that if the party won't cure the problems of the world it might still be the place where we can begin to imagine a new one. Dancing, mixing, bonding, communicating, working, building, and praying, the night still shimmers with a utopian hope that daylight has yet to deliver.'

Tim Lawrence in Love Saves the Day
